DETAILED ACTION

Allowable Subject Matter

Claims 1-27 are allowed.

The following is an examiner's statement of reasons for allowance:

As for claim 1, the prior art does not teach or fairly suggest the use of a digital camera that creates a composite image by displaying a previous image along with an image that is to be captured, and after the composite image is confirmed, both the previously stored image and the current image are stored separately, as well as the corresponding additional data consisting of image composition parameters.

As for claim 6, the prior art does not teach or fairly suggest the use of a digital camera that that creates a composite image by clipping out the reference area of the image automatically when the subject in the image is focused.

As for claim 7, the prior art does not teach or fairly suggest the use of a digital camera that that creates a composite image, and that when set to stereophotographic mode the area of the image that has a focal distance set to infinity, is clipped out the reference image automatically and set to the reference image area.

As for claim 11, the prior art does not teach or fairly suggest the use of an image processing method for a digital camera that creates a composite image by displaying a previous image along with an image that is to be captured, and after the composite image is confirmed, both the previously stored image and the current image are stored separately, as well as the corresponding additional data consisting of image composition parameters.

As for claim 14, the prior art does not teach or fairly suggest the use of an image processing method for that that creates a composite image by clipping out the reference area of the image automatically when the subject in the image is focused.

As for claim 20, the prior art does not teach or fairly suggest the use of a digital camera that creates a composite image by displaying a previous image along with an image that is to be captured, and after the composite image is confirmed, both the previously stored image and the current image are stored separately, as well as the corresponding additional data consisting of image composition parameters.

As for claim 23, the prior art does not teach or fairly suggest the use of a digital camera that creates a composite image by displaying a previous image along with an image that is to be captured, and after the composite image is confirmed, both the previously stored image and the current image are stored separately, as well as the corresponding additional data consisting of image composition parameters.

As for claim 24, the prior art does not teach or fairly suggest the use of an image processing method for a digital camera that that creates a composite image by clipping out the reference area of the image automatically when the subject in the image is focused.

As for claim 25, the prior art does not teach or fairly suggest the use of an image processing method for a digital camera that that creates a composite image by clipping out the reference area of the image automatically when the subject in the image is focused.
